# Topology Optimization Design Validation (Beta Feature)

Debug Automatic Scoping

For projects saved prior to release 2020 R1 that are using non-associative CAD import, the automatic propagation of scoping for the downstream validation system will not occur. You can correct the situation by returning to Mechanical and selecting the **Project** object, right-clicking, and selecting **Debugging** > **Repair Object Attachment (Beta)** illustrated below. Once the debug option is executed, the downstream analysis should update accordingly. In addition, this correction does not invalidate the Topology Optimization analysis
